

## Switchless, Scalable, Single-Target KVM Control via Web Browser

### Enterprise-class KVM-over-IP in a palm-sized form factor

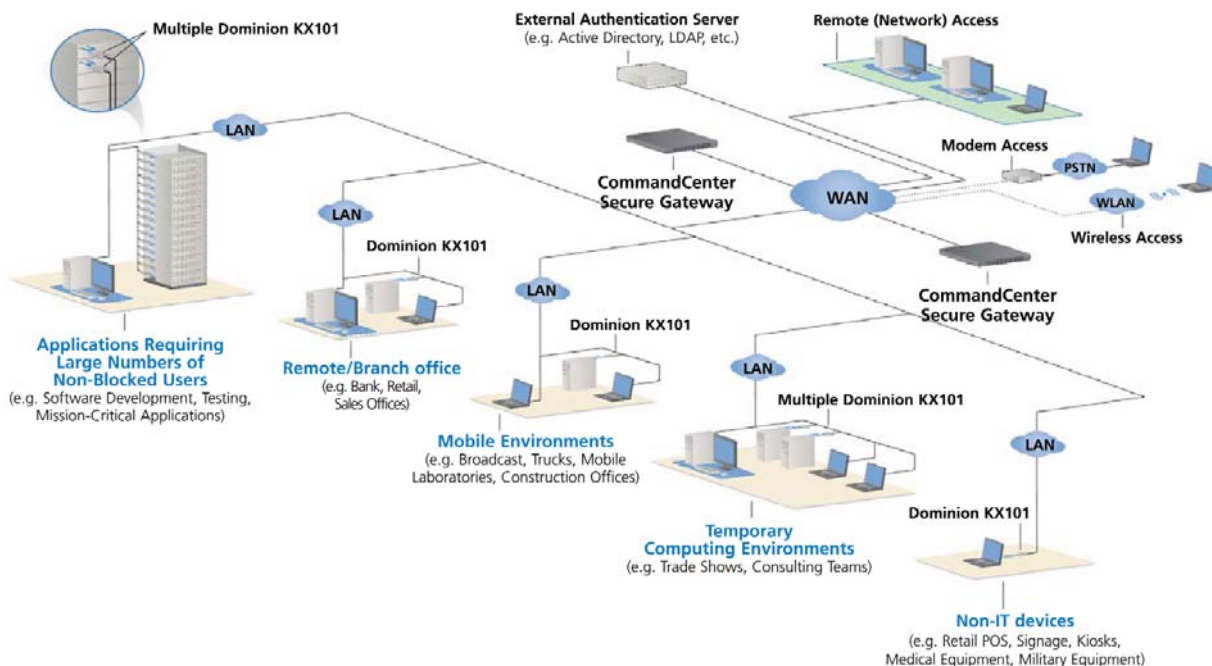

Dominion KX101 is a palm-sized and highly portable, next-generation, enterprise-class KVM-over-IP device that eliminates the blocking factor inherent in switched KVM architectures. It provides anytime, anywhere access and BIOS-level control of a single server, via a dedicated

IP address. The Dominion KX101 shrinks all the performance and security features of Raritan's industry-leading remote KVM access and control technology into a "zero-U" single-port density form factor.

The Dominion KX101 is engineered to provide bulletproof security, feature-rich management functionality and the highest quality video available, all over an IP network.
